

Power Apps Planning Worksheet

What does the user see and do?

WORKSHEET A

App or screen name

Primary user

Main goal

Describe this screen

What should the user see first? What task should they complete?

Draw the screen with interface symbols

Try: Gallery, Container, Button, Label, Text Input, Dropdown, Toggle, Table, Image, Icon, Form, Search, Navigation

Extra notes

Inputs

Actions

Outputs

Connections to the other Power Platform tools

What information is received or passed to Power Apps, Power Automate, Power BI, or Microsoft Lists?

Testing checklist

- ☐ The user can understand the screen without instructions.
- ☐ Every button or selectable item has a clear result.
- ☐ Loading, empty, success, and error states are planned.

Notes can continue on the back or in the margins.

Power Apps Planning Worksheet

What does the user see and do?

WORKSHEET B

App or screen name

Primary user

Main goal

Describe this screen

What should the user see first? What task should they complete?

Draw the screen with interface symbols

Try: Gallery, Container, Button, Label, Text Input, Dropdown, Toggle, Table, Image, Icon, Form, Search, Navigation

Extra notes

Inputs

Actions

Outputs

Connections to the other Power Platform tools

What information is received or passed to Power Apps, Power Automate, Power BI, or Microsoft Lists?

Testing checklist

- ☐ The user can understand the screen without instructions.
- ☐ Every button or selectable item has a clear result.
- ☐ Loading, empty, success, and error states are planned.

Notes can continue on the back or in the margins.

What happens after the trigger?

WORKSHEET A

Flow name

Who or what starts it?

Main outcome

Describe this automation

What starts the flow, what decisions are made, and what happens at the end?

Draw the flow from trigger to outcome

Sketch: Trigger -> Get data -> Condition -> Actions -> Update record / Notify / End

[illegible]

Extra notes

Trigger inputs

Conditions and actions

Outputs and updates

Connections to the other Power Platform tools

What information is received or passed to Power Apps, Power Automate, Power BI, or Microsoft Lists?

Testing checklist

- ☐ The trigger uses the correct record and starts only when expected. ☐ Yes, no, failure, timeout, and retry paths are considered. ☐ The final record status and notifications are correct.

Notes can continue on the back or in the margins.

What happens after the trigger?

What starts the flow, what decisions are made, and what happens at the end?

Sketch: Trigger -> Get data -> Condition -> Actions -> Update record / Notify / End

A large grid of graph paper with a blue border, intended for drawing a picture. The grid consists of 20 columns and 10 rows of squares.

What information is received or passed to Power Apps, Power Automate, Power BI, or Microsoft Lists?

- ☐ The trigger uses the correct record and starts only when expected.

☐ Yes, no, failure, timeout, and retry paths are considered.

☐ The final record status and notifications are correct.

Notes can continue on the back or in the margins.

WORKSHEET A

Decision or question

What should viewers learn in five seconds? What details should they explore next?

Try: KPI cards, bar or line chart, table, slicer, title, annotations, drill-through

Notes can continue on the back or in the margins.

WORKSHEET B

Decision or question

What should viewers learn in five seconds? What details should they explore next?

Try: KPI cards, bar or line chart, table, slicer, title, annotations, drill-through

Extra notes

What information is received or passed to Power Apps, Power Automate, Power BI, or Microsoft Lists?

☐ Every visual answers a useful business question.

☐ Totals, filters, dates, and blank values are accurate.

☐ The most important insight is easy to find and explain.

Notes can continue on the back or in the margins.

Microsoft Lists Planning Worksheet

What data must be stored consistently?

WORKSHEET A

List name

Owners and users

Purpose

Describe this list

What does one row represent? Who creates, updates, and reads each record?

Plan the list columns

Column name	Type	Required?	Example value

Extra notes

Data entering the list

Rules and status changes

Views and downstream uses

Connections to the other Power Platform tools

What information is received or passed to Power Apps, Power Automate, Power BI, or Microsoft Lists?

Testing checklist

- ☐ Required fields and allowed choices prevent incomplete records.
- ☐ Example values match the selected column types.
- ☐ Views, permissions, and ownership support each user group.

Notes can continue on the back or in the margins.

Microsoft Lists Planning Worksheet

What data must be stored consistently?

WORKSHEET B

List name

Owners and users

Purpose

Describe this list

What does one row represent? Who creates, updates, and reads each record?

Plan the list columns

Column name	Type	Required?	Example value

Extra notes

Data entering the list

Rules and status changes

Views and downstream uses
